Attention: Biology and Chemistry majors

Do you know what you’re going to do with your degree?

If you love working in the lab and like being part of the medical fact-finding process, consider becoming a Clinical Laboratory Scientist (CLS).

What’s does a CLS do?

The CLS performs laboratory analyses in all departments of the clinical laboratory, using samples from the human body.

Are there jobs available?

Yes! There is a severe shortage of Clinical Laboratory Scientists (CLS) in the workforce, due to retirements. There are thousands of CLSs working in the greater S.F. Bay Area.

Find out more about how you can become a licensed CLS at the CLS Internship Program Advising Sessions:

Note: Schedule is subject to change.

- **Saturday, Sept. 20**: 10-11 a.m., Library Events Room *
